

Preliminary results from the 2024 small grain Virginia official variety trials

Nicholas Santantonio

July 8, 2024

Abstract

Heat and drought during the grain fill period led to rapid maturation and reduced test weight for the 2023-2024 growing season. Fortunately, precipitation throughout the region during mid- to late grain fill largely saved the crop, with another period of heat and low precipitation at maturation helped mature the crop 1-2 weeks earlier than typical, and allowed growers to get into the field to harvest with plenty of time. Disease pressure was high in some regions. Barley Yellow Dwarf Virus had very high infection rates in eastern and southern Virginia, and especially in fields that were planted early. Leaf rust came in earlier than typical in eastern Virginia and the eastern shore, and was particularly detrimental for eastern growers who did not apply fungicide to treat fusarium head blight (scab) infection. Powdery mildew was observed in Eastern Virginia but low pressure due to high temperatures and dry conditions shortly after disease onset. Fusarium head blight (scab) pressure was moderate across most of the state, and came on slightly later than typical years.

Table 1: Virginia state soft winter wheat official variety test at 5 sites across Virginia in 2024. Sites included Blacksburg, Blackstone, Orange, Painter, and Warsaw VA. Holland was not included due to poor establishment and excessive deer damage. Plots at Shenandoah valley were not harvested due to excessive lodging.

A plus or minus sign indicates a performance significantly above or below the test average.

The 0-9 ratings indicate a genotype's response to disease or lodging where 0 = highly resistant and 9 = highly susceptible.

FHB = Fusarium Head Blight Score (0-9)

FDK = Fusarium Diseased Kernels (percent)

DON = Deoxynivalenol concentration in the kernels (ppm)

Awns, A = Awned, TA = Tip-Awned, and AL = Awnless

CV	13.5	3.7	1	4	88.1	61.1	47	NA

A plus or minus sign indicates a performance significantly above or below the test average.

The 0-9 ratings indicate a genotype's response to disease or lodging where 0 = highly resistant and 9 = highly susceptible.

FHB = Fusarium Head Blight Score (0-9)

FDK = Fusarium Diseased Kernels (percent)

DON = Deoxynivalenol concentration in the kernels (ppm)

Awns, A = Awned, TA = Tip-Awned, and AL = Awnless

A plus or minus sign indicates a performance significantly above or below the test average.

The 0-9 ratings indicate a genotype's response to disease or lodging where 0 = highly resistant and 9 = highly susceptible.

FHB = Fusarium Head Blight Score (0-9)

FDK = Fusarium Diseased Kernels (percent)

DON = Deoxynivalenol concentration in the kernels (ppm)

A plus or minus sign indicates a performance significantly above or below the test average.

The 0-9 ratings indicate a genotype's response to disease or lodging where 0 = highly resistant and 9 = highly susceptible.

FHB = Fusarium Head Blight Score (0-9)

FDK = Fusarium Diseased Kernels (percent)

DON = Deoxynivalenol concentration in the kernels (ppm)

Awns, A = Awned, TA = Tip-Awned, and AL = Awnless

A plus or minus sign indicates a performance significantly above or below the test average.

The 0-9 ratings indicate a genotype's response to disease or lodging where 0 = highly resistant and 9 = highly susceptible.

FHB = Fusarium Head Blight Score (0-9)

FDK = Fusarium Diseased Kernels (percent)

DON = Deoxynivalenol concentration in the kernels (ppm)

Awns, A = Awned, TA = Tip-Awned, and AL = Awnless
